VYBE — AI-Powered Campus Volunteer Intelligence

The right people. The right event. The right time.

Problem Statement

PROBLEM STATEMENT (AS GIVEN)

Event Volunteer Allocation

WHAT THIS MEANS FOR OUR CAMPUS

Matching student volunteers to the right roles, shifts and events fairly, without clashes, and with the organizer in control.

PROBLEM ID

PS-009

DOMAIN

Full stack / Web Development

OUR FOCUS

Fair, explainable volunteer matching

Understanding the Problem

Who is affected?

- Student volunteers whose skills go unnoticed
- Organizers and faculty coordinating events
- Every club and fest across branches

What is going wrong?

- Manual picking over chats and forms is slow
- Skills do not match roles; schedules clash
- The same few students get chosen repeatedly

Why does it matter?

- Events run understaffed or poorly organised
- New volunteers never get a chance to grow
- More events each year means manual work won’t scale

Our Proposed Solution

THE IDEA IN ONE LINE

We help organizers staff events fairly and students find the right roles, by pairing rule-based allocation with explainable AI, unlike manual forms and chat groups.

How it works

1

Step 1 — Input

Organizers define events and roles; students add profile and availability and apply

2

Step 2 — Process

Rules filter eligibility and clashes, then rank the best fits and balance workload

3

Step 3 — Outcome

Organizer approves explainable picks; volunteers get roles, reminders and growth paths

Key Features

Smart Allocation

Filters by eligibility, availability and clashes, then ranks the best-fit volunteers.

AI Event Co-Pilot

Suggests roles, staffing, schedules and checklists. Organizers can edit everything.

AI Volunteer Guide

Recommends events with reasons and a skill roadmap, based on the student's own inputs.

Profiles & Applications

One profile for skills, availability and history, with role-wise applications and status.

Event Coordination

Role schedules, reminders, QR attendance, venue maps and opt-in location sharing.

Fair & Transparent

Role-based access, explainable picks and organizer approval on every decision.

Architecture & Tech Stack

User layer

Web app for students and organizers, with role-based dashboards

Application layer

Allocation engine, conflict checks, scheduling, notifications and AI calls

Data & AI layer

Profiles, events and attendance data; AI only suggests and never decides eligibility

Tech stack

Design	Figma
Frontend	React + Tailwind CSS
Backend	Node.js + Express
Database	PostgreSQL
AI / APIs	LLM API, Maps API

Innovation & Differentiation

Aspect	Existing solutions	Our solution
Ease of use	Manual forms, chat groups and spreadsheets	One platform to apply, match, confirm and coordinate
Cost / access	Scattered tools; roles visible to only a few students	Open to every student, at branch or college level
Personalization	One-size-fits-all calls with no guidance on fit	Matched events, with reasons and a skill roadmap
Scalability	Effort grows with every new event and volunteer	Same rules and ranking work for any event size

Our unique edge: fair, explainable allocation where AI advises and organizers decide.

Impact, Feasibility & Risks

Impact	Less manual coordination for organizers; fairer, better-matched roles and skill growth for students.
Feasibility	Uses standard web technology and existing AI APIs, so a small team can build a working core.
Scalability	The same rules run for any event size, from one branch to the whole college and other campuses.
Risks & mitigation	Wrong AI advice or data misuse: rules decide eligibility, organizers approve, access is role-based, location is opt-in.
